L - length overall of a vessel or length overall of the towing unit covering the sum of the maximum length of the towed craft and a tugboat-expressed in metres and centimetres,

6. The vessels' summer draught means the draught corresponding to the Summer Load Line (other than the timber load lines) assigned in accordance with the International Convention on Load Lines, but for vessels to which no load line has been assigned – maximum current draught.
7. The volume of the vessel or the towing unit shall be calculated on the basis of the data contained in the registry books of the British classification society, published in the Lloyd's Register of Ships, unless when ordering a pilot service, the international Tonnage Certificate or the Certificate of Registry is presented.
